

iwis wear gauges for roller chains and leaf chains

The optimum solution to measure chain stretch due to wear

Our solution: A series of precision manufactured marine grade stainless steel gauge sets which give an immediate indication as to how far the chain has stretched by simply placing the datum end over a pin and taking a reading from the opposing end.

Highlights:

- Can assist preventative maintenance programs with minimal effort
- Can provide measurement where a vernier caliper cannot be used
- Each set will measure BS & ANSI standard roller chains
- High quality tough hard wearing gauge set and case
- Sets also available for measurement of leaf chain upon request
- Gauge will advise when chain needs replacing as well as percentage of stretch.

Set range:

- No. 1 – 3/8", 1/2", 5/8", 3/4" 1" Pitch BS & Ansi Roller Chains
- No. 2 – 11/4", 11/2", 13/4" 2" Pitch BS & Ansi Roller Chains
